

E-Commerce Project (Week 3)

Developed by: Faisal Alsubaie

With consult of: Yura & Islam

- **Main problems we had:-**

We faced a lot of problems doing the project and a lot of obstacles.

In fact, it would be easier to say what didn't go wrong so I will focus on the main problems that took more than 2 hours to fix.

1- Dealing with files, there are little to none good resources that can help you with dealing with the files.

2- Templates, all the templates on the internet require you to pay money.

3- Validations, validation wasn't hard they just took a lot of time to do.

- **How we fixed it:-**

1- We had to try and debug everything until it worked.

2- Asked AI to do the templates.

3- Being patient and doing them one by one.

- **What we learned ?**

The main new things that we learned this week is **Debugging** and handling **Files**.

- **Conclusion**

The task was fun and kept me busy the whole week and improved me a lot to find the problems and solving them.
